

COVID-19 Analysis

Specific Topics

This panel displays a list of topics that are specific to the management of the Covid-19 crisis. Each topic has an associated score of pessimistic language in the news stories that address or mention it. We devised this score as an assessment of the outlook that communities facing the given topics have on their situation. The global crisis of protective gear, the struggle to find a vaccine, the constructive competition for a cure, the impact of finding more and more positive tests, all of these can be felt or assessed in the pessimistic language that accompanies them.

Click on each column in the header of the list allows you to sort the data alphabetically and numerically.

SPECIFIC TOPICS		
Topics that are specifically about the Covid-19 pandemic, with their associated share of pessimistic language.		
Topic	Frequency	Pessimism(%)
Blood pressure	9	22%
Cardiac	2	50%
Chlorine	2	0%
Chloroquine	133	13%
Community spread	17	29%
